A Franklin Templeton Company

Royce Premier Fund

	Steven McBoyle Lauren Romeo, CFA® Andrew Palen	 Why invest in Royce Premier Fund? Small-cap core fund that seeks to invest in premier small-cap companies, those Royce sees having discernible competitive advantages, high returns on capital, and a sustainable franchise. Small-cap stocks' market caps are less than the largest stock in the Russell 2000[®] Index. Focuses on leading quality companies, those with low debt, the ability to generate excess
Small-Cap Core Approach	\$ 5.05 B Avg Market Cap ²	 cash flow, and attractive prospects that are selling at prices Royce believes do not fully reflect these attributes. Average annual total return of 10.7% since inception (12/31/91) through 3/31/25.

ormance and Expense Information

nation reflects past performance, is presented on a total return basis, reflects the reinvestment of distributions, e deduction of taxes that a shareholder would pay on fund distributions or the redemption of fund shares. Past rantee of future results. Investment return and principal value of an investment will fluctuate, so that shares may be worth more or less than their original cost when redeemed. Current month-end performance may be higher or lower than performance quoted and may be obtained at www.royceinvest.com. Operating expenses reflect the Fund's total annual operating expenses for the Investment (RYPRX) or Institutional (RPFIX) Class and include management fees and other expenses. Gross operating expenses for the Service (RPFFX) Class reflect the Fund's gross total annual operating expenses and include management fees, 12b-1 distribution and service fees, and other expenses. Net operating expenses reflect contractual fee waivers and/or expense reimbursements. All expense information is reported as of the Fund's prospectus dated May 1, 2025. Royce has contractually agreed, without right of termination, to waive fees and/or reimburse expenses to the extent necessary to maintain the Service Class's net annual operating expenses (excluding brokerage commissions, taxes, interest, litigation expenses, acquired fund fees and expenses, and other expenses not borne in the ordinary course of business) at or below 1.49% through April 30, 2025.

All performance and risk information presented in this material prior to the commencement date of Service Class shares on 9/3/02 and Institutional Class shares on 9/17/02 reflect Investment Class results. Service Class shares bear an annual distribution expense that is not borne by Investment or Institutional Class shares. If Service Class's annual distribution expense had been reflected, total returns prior to 9/3/02 would have been lower. The Investment and Institutional Classes would have substantially similar returns because all classes invest in the same portfolio of securities, differing only to the extent that the classes have different expenses. All performance charts reflect the Investment Class.

"We look for small-cap companies with high returns on invested capital that we believe can compound value by reinvesting their current earnings back into the business at high rates of return over the long run."

-Lauren Romeo

1. Royce dassifies a dient account as 'Core' because it anticipates the dient account equity holdings will have a weighted average price-to-book ratio or weighted average normalized price-to-earnings ratio that is similar to, or somewhat higher than, its general asset class. 2. Geometric Average. This weighted calculation uses each portfolio holding's market cap in a way designed to not skew the effect of very large or small holdings, instead, it aims to better identify the portfolio's center, which Royce believes offers a more accurate measure of average market cap than a simple mean or median. 3. Low Volatility. The Fund was in the lowest volatility quintile compared with all funds in Morningstar's Small Growth, Small Blend, and Small Value Categories with at least five years of history, a total of 459 funds as of 3/31/25. The universe consists of each funds oldest share class only. Volatility quintiles are based on the average five-year standard deviation for each of the last four calendar quarters. Higher volatility is usually associated with higher risk. 4. Active Share is the sum of the absolute values of the different weightings of each holding in the Portfolio versus each holding in the benchmark, divided by two. 5. Harmonic Average. This weighted calculation evaluates a portfolio as if it were a single stock and measures it overall. It compares the total market value of the portfolio to the portfolio's share in the earnings or book value, as the case may be, of its underlying stocks. 6. The Priceto-Earnings Ratio is calculated by dividing a company's share price by its trailing 12-month earnings-per-share (EPS) and also excludes companies with zero or negative earnings (6% of Portfolio holdings as of 3/31/25). 7. The Price-to-Book Ratio is calculated by dividing a company's share price by its book value per share (0% of Portfolio holdings were excluded as of 3/31/25).

This material is not authorized for distribution unless preceded or accompanied by a current prospectus. Please read the prospectus carefully before investing or sending money. The Fund invests primarily in small-cap stocks, which may involve considerably more risk than investing in larger-cap stocks. The Fund also generally invests a significant portion of its assets in a limited number of stocks, which may involve considerably more risk than investing in larger-cap stocks. The Fund also generally invests a significant portion of its assets in a limited number of stocks, which may involve considerably more risk than more broadly diversified portfolio because a decline in the value of any one of these stocks would cause the Fund's overall value to decline to a greater degree. (Please see "Primary Risks for Fund Investors" in the prospectus.) The Fund may involve political, economic, currency, and other risks not encountered in U.S. investments. (Please see "Investing in Foreign Securities" in the prospectus.)

The **Morningstar Style Map** uses proprietary scores of a stock's value and growth characteristics to determine its placement in one of the five categories listed on the horizontal axis. These characteristics are then compared to those of other stocks within the same market capitalization band. Each is scored from zero to 100 for both value and growth attributes. The value score is subtracted from the growth score to determine the overall style score. For the vertical, market cap axis, Morningstar subdivides into size groups. Giant-cap stocks the next 20%; small-cap stocks the next 7%; micro-cap stocks the smallest 3%. **Market Capitalization** is calculated by multiplying a company's share price by its shares outstanding. **Upside Capture Ratio** measures a manager's performance in up markets relative to the Fund's benchmark (Russell 2000). It is calculated by measuring the Fund's performance in quarters when the benchmark goes up and dividing it by the benchmark's return in those quarters. **Standard deviation** is a statistical measure within which a client account's total returns have varied over time. The greater the standard deviation, the greater a portfolio's volatility. Please read the prospectus for a more complete discussion of risk.
